

Hazardous site protection

We supply a unique range of products to mark out hazardous and sensitive sites – at the most competitive prices. We also design, develop and source products, so if you want something specific, talk to us!

The all-new zebra2[®]

FMG and BHP have been using the original Zebra cap to demarcate heritage sites in the Pilbara for over two years. The all-new zebra2[®] is perfect for:

- Civil construction companies
- Local authorities
- Developers
- The mining industry

Versatile!

1. Versatile

- Triangular shape fits over star-pickets
- Clips for barrier mesh/surveyor's tape
- Holes for attachment of signs
- Different colours for different applications

2. Cost-effective

- Easy and quick to install
- Long-lasting
- Cheap to purchase

3. Simple

- Light in weight, strong in structure
- High visibility, colour-fast UV-treated polyethylene
- Supplied in crates for easy transportation

The zebra barrier roll

For quick and easy demarcation of more sensitive or hazardous sites. You can even custom-print it with your company logo or any specific warning signs.

Re-usable!

Benefits:

- No more loose, unsightly mesh
- Can be re-used! Just roll it up, put into a special bag and take to the next site
- More secure – blocks off the hazard
- Keeps the dust inside
- Makes the hazard more visible, which reduces liability risks

zebra[®] demarcation systems

From durable demarcation caps to strong yet lightweight barriers, our products ensure that sensitive areas are clearly marked to discourage and prevent unauthorised access.

Here's how the zebra barrier roll works:

1. Comes in 25m length of mesh rolled around a tailor-made tube.
2. Install star pickets around the site.
3. Slip the tube and zebra cap over one of the star pickets.
4. Slip a single zebra cap over each one of the other star pickets.
5. Simply unroll the mesh and walk from star picket to star picket, attaching the mesh to the special hooks on top of each zebra cap as you go along (using the custom-made button holes along the edge of the mesh).
6. Secure the bottom of the mesh by putting a cable tie through the bottom button holes and attaching it to the star picket.

Mesh features:

- Extremely durable
- Highly visible orange colour with yellow stripe
- Can be printed with your company name etc.
- Lengths can be custom made
- Different colours for different applications

Warning signs:

It's easy to clip signs onto the zebra2, which:

- make sensitive sites even more visible
- create maximum awareness - low liability risk

NB: We can supply the signs as well, with the appropriate clips.

rhino barrier

For more permanent site demarcation, the Rhino barrier is the answer.

1. Cost-effective:
 - Strong
 - Lightweight
 - Highly visible
 - Portable
 - Different colours for different applications
2. Usage:
 - Heritage site protection
 - Road blocks
 - Crowd control
 - Warning sign (manholes etc.)
 - Safety demarcation
 - Coral fencing
 - Stores/stock control, bays
